

**SINCE WE BELIEVE LIFE'S ABUNDANCE IS A FOUNDATION TO YOUR PUPPY'S HEALTH, YOUR PUPPY WILL BE STARTED ON Life's Abundance All Stage Dog Food.**

## Why we recommend Life's Abundance

- ✿ Made in USA using high quality organic all-natural USA ingredients
- ✿ Not sold in retail stores, shipped directly to customer
- ✿ Made fresh (To ensure freshness, only order a 3-6 months' max supply.)
- ✿ 1-year shelf life
- ✿ Never had a product recall
- ✿ Contains Omega 3's & 6's
- ✿ Contains prebiotics, probiotics and antioxidants
- ✿ No fillers, artificial flavors or colors

*Prior to picking up your puppy, we recommend you order a 40 lb. bag, which will help your puppy transition to your new home. This is the high-quality food your puppy has been started on. If you choose auto-ship when ordering, you will get our wholesale price. Start with a 7-week shipping frequency and adjust from there.*

[Click here to order LIFE'S ABUNDANCE food, treats and supplements directly.](#)

*At first glance Life's Abundance appears to be expensive, but it's nutrient-dense so you feed less per day. This makes your cost per feeding less than other brand name dogs foods.*

**Give your puppy the nutritional advantage of Life's Abundance.**

### What to avoid in Dog food

All of the ingredients listed below are fillers and DO NOT promote the health and nutritional needs of your dog. They are commonly found in big hype/brand name foods.

**Any by-product meal** is a dry rendered product of slaughterhouse waste. It's made from what's left of a slaughtered chicken after all the prime cuts have been removed. In a nutshell, chicken by-products are those unsavory leftovers, usually considered "unfit for human consumption". In addition to organs (the nourishing part), this stuff can contain almost anything — feet, beaks, undeveloped eggs — anything except quality skeletal muscle (real meat).

**Cornmeal** as one of the first 3 ingredients, a coarsely ground flour made from dried corn. Corn is an inexpensive and controversial cereal grain of only modest nutritional value to a dog. For this reason, we do not consider corn a preferred component in any dog food.

**Brewers rice** as one of the first 3 ingredients. Brewers rice is a cereal grain by-product consisting of the small fragments left over after milling whole rice. Aside from the caloric energy it contains, this item is of only modest nutritional value to a dog.

**Corn, soy, wheat, wheat gluten, gluten, rice flour, wheat flour, etc.** - Also called fillers and empty calories, are often a main ingredient because they are a cheap way to fill up a bag and still meet basic requirements. Not only are they not as nutritious as whole grains, but they are also common dog allergens. If your dog suffers from skin irritations, switching foods is often a big help or even the solution. Instead, look for whole grains such as brown rice, barley, and oatmeal.

**Artificial colorings/dyes.** FD&C Blue No. 1, Red No. 40, Yellow No. 5 are common examples. These artificial colorings are used in many pet products to entice owners into a purchase; however, they have no nutritional value and may be responsible for adverse or allergic reactions.

**Preservatives.** BHA, BHT, sodium nitrite and nitrate are examples of food preservatives that should be avoided. Preservatives are used in the production of pet food to limit the growth of bacteria or inhibit oxidation of food. Many preservatives are known to be carcinogens (cancer-causing) in humans and pets and should be avoided. **Natural alternatives for preserving food includes a mixture of varying forms of vitamin E called mixed tocopherols, rosemary extract and even the process of freeze-drying**

**Food additives and preservatives.** Corn syrup, sugar, molasses, propylene glycol and MSG are examples of artificial flavors frequently used in pet food manufacturing to disguise inferior food quality and some of these additives give dampness and flexibility to semi-moist foods and treats. These are often additional sources of "empty" or non-nutritious calories that contribute to pet obesity. **If a pet food company is using high quality natural ingredients, there will be no need to enhance the flavor of the food with these additives.**
